

Workshop “H2I: Hyperspectral images for inspection applications» September 16, 2021

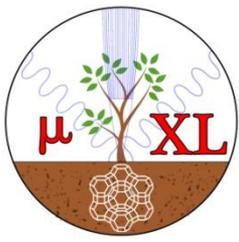

Wood analysis using tomographic and X-ray microfluorescence techniques

Roberto Terzano & Carlo Porfido

Department of Soil, Plant and Food Sciences

Micro X-ray Lab

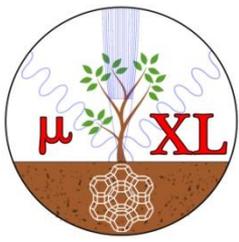

University of Bari «Aldo Moro»

Outline

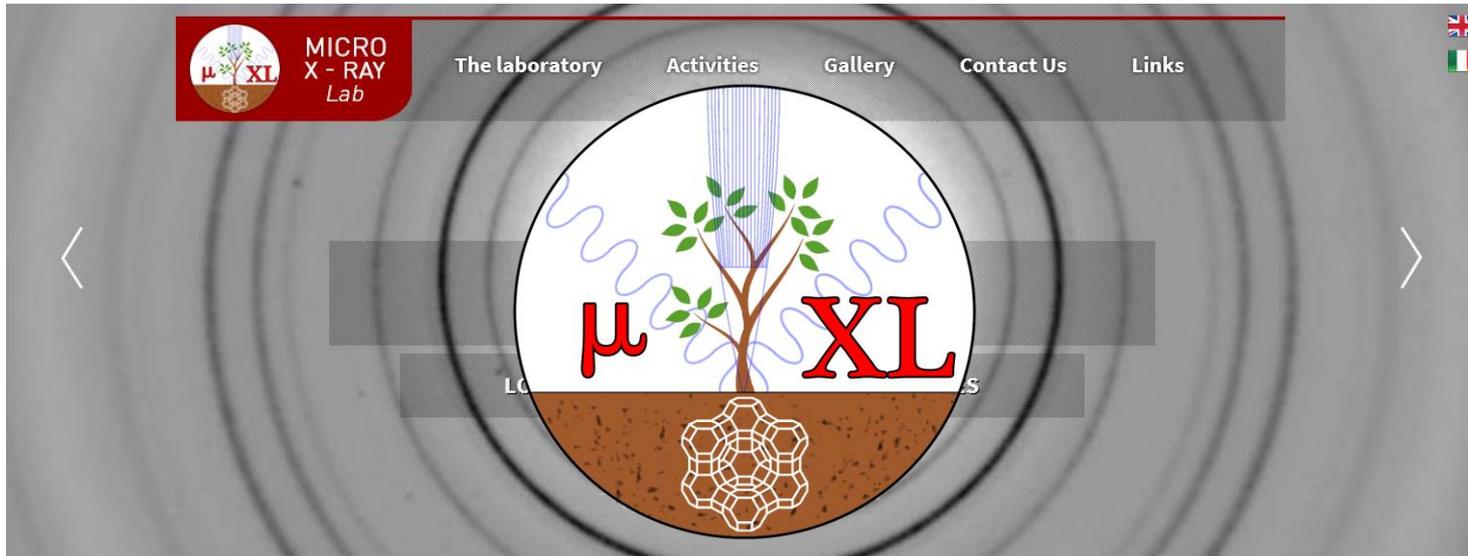

- **Presentation of Micro X-ray Lab and X-ray analytical techniques**
- **Introduction to micro X-ray tomography and micro X-ray fluorescence**
- **Applications to wood samples and results**

Micro X-ray Lab

www.microxraylab.com

 **THE LAB**

"Micro X-ray Lab" is a public research laboratory equipped with modern state-of-the-art analytical instruments managed by highly qualified researchers of international reputation.

[Read More »](#)

 **SERVICES**

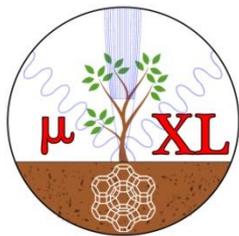

We supply advanced scientific support to public and private enterprises in the development of new processes and technologies for environmental and agricultural applications.

[Read More »](#)

 **EQUIPMENT**

- X-ray fluorescence
- Total reflection X-ray fluorescence
- Powder X-ray diffraction
- Micro X-ray fluorescence
- HR micro X-ray tomography
- FEG SEM and microanalysis

Ida Rascio

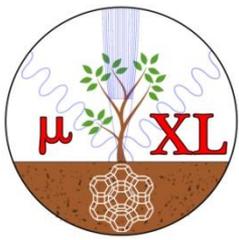

UniBA
Environmental Biologist

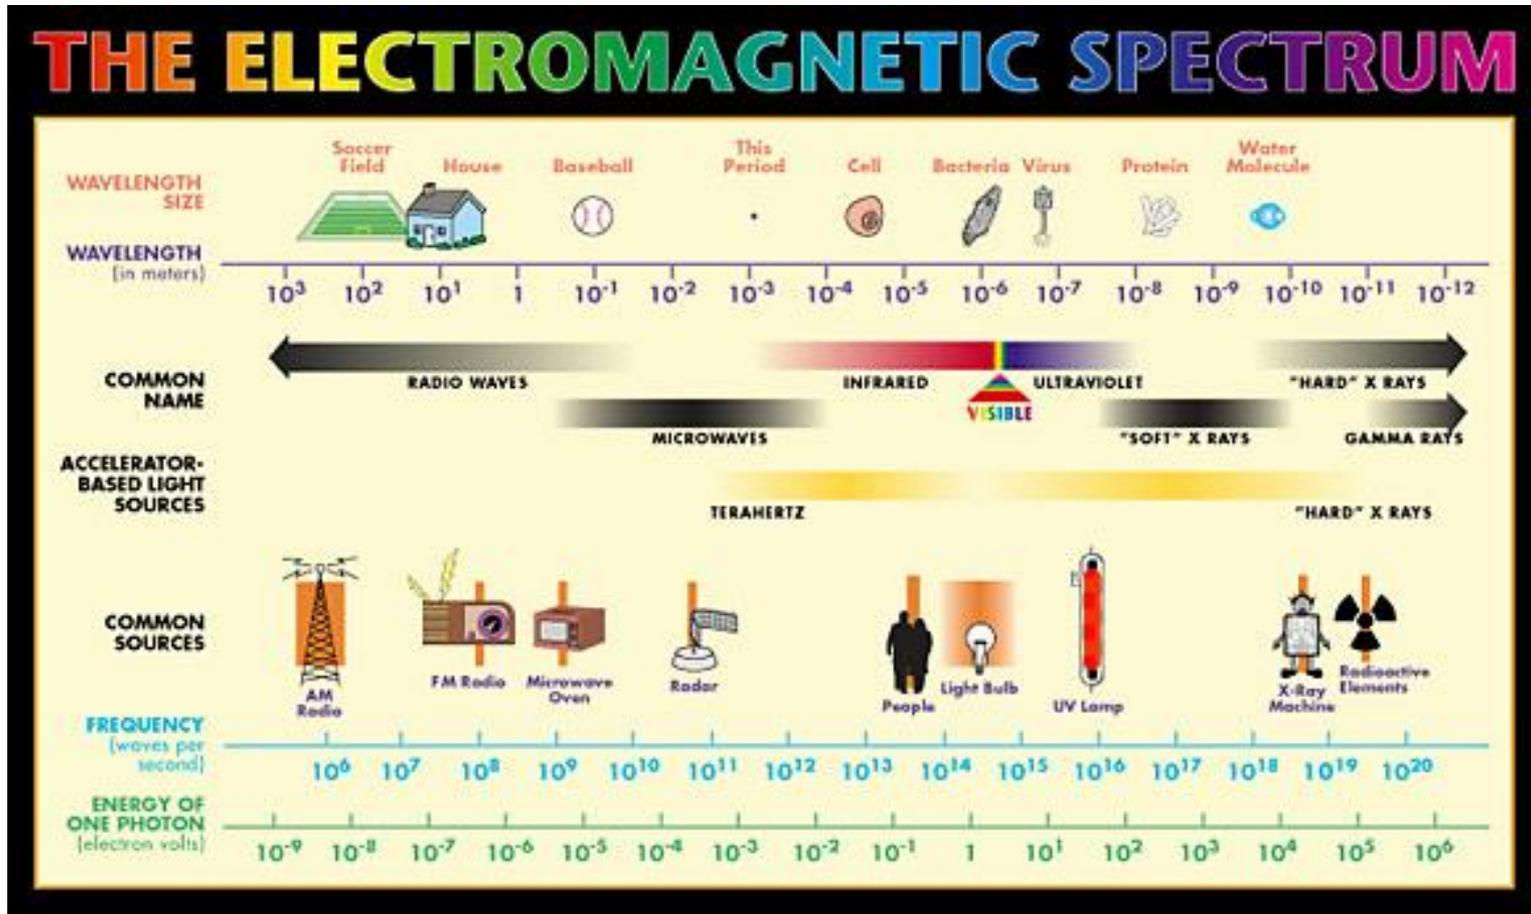

Research activities @ Micro X-ray Lab

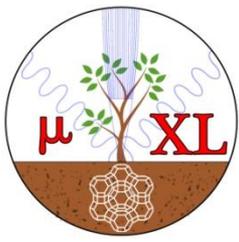

- **Soil pollution and soil remediation**
- **Plant science**
- **Food science**
- **Material science**
- **Cultural heritage**
- **Geology and geochemistry**

Hyperspectral images: X-rays

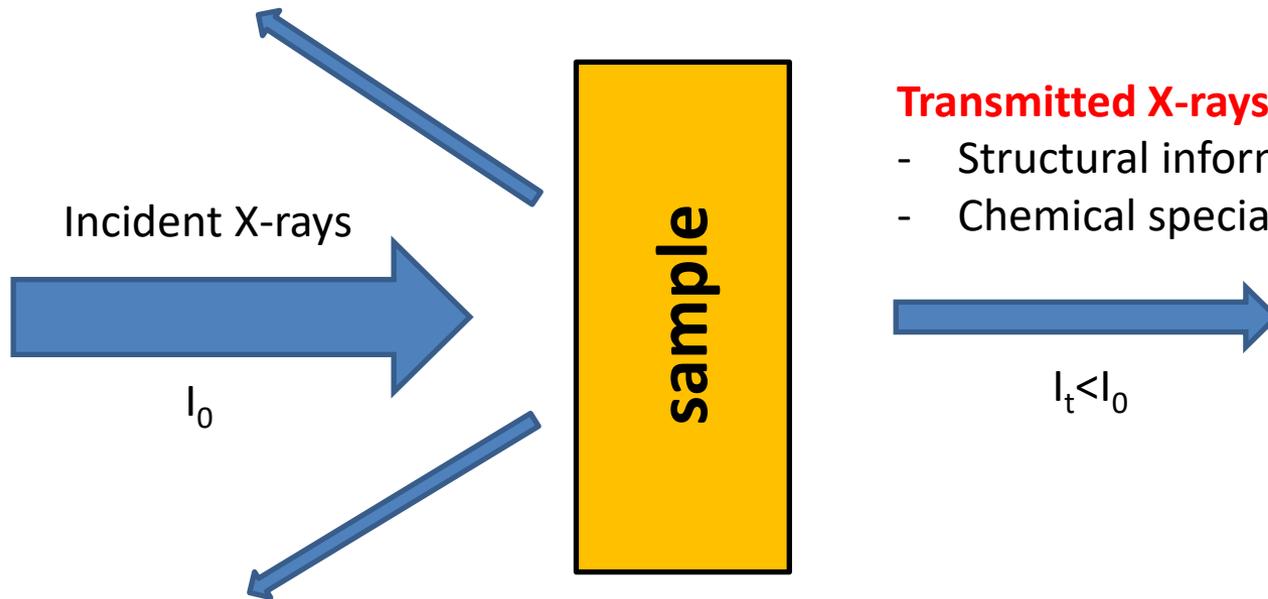

Interaction of X-rays with matter

Scattered (diffracted) X-rays
(structural information, mineral identification)

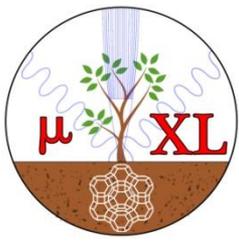

Transmitted X-rays

- Structural information (μ XCT)
- Chemical speciation (XAS)

Fluorescence X-rays (XRF)

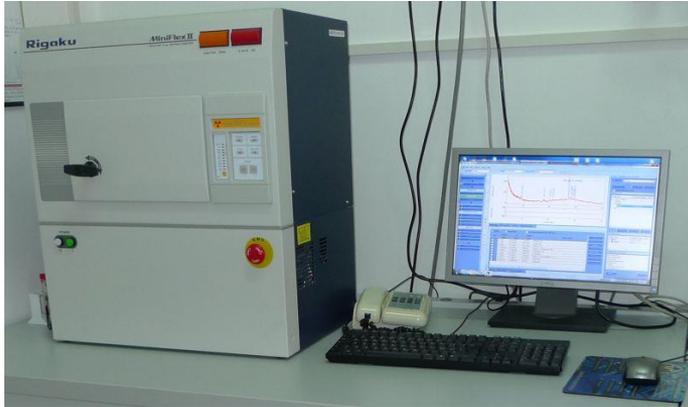

(chemical information, elemental analysis)

X-ray techniques at “Micro X-ray Lab”

XRD

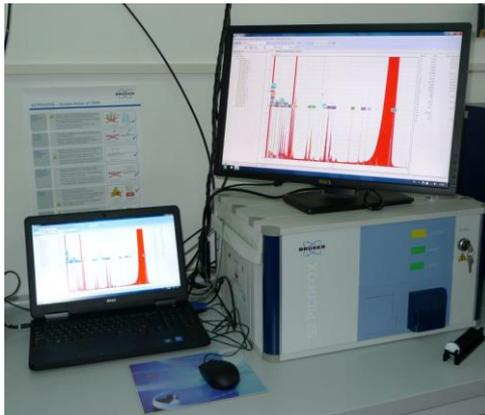

XRF

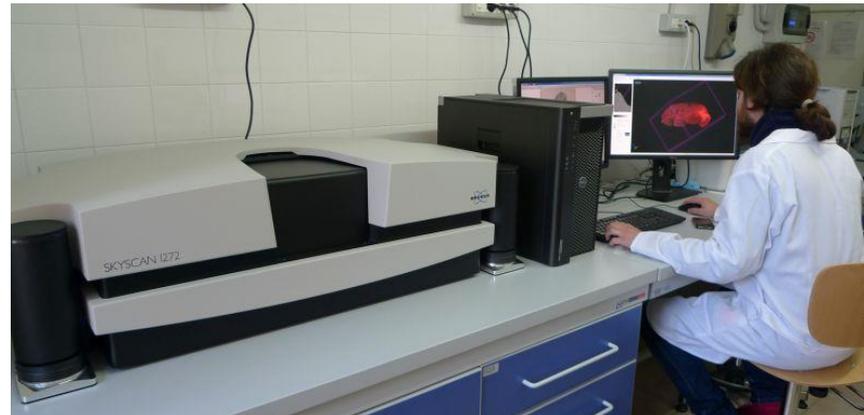

μXRF

TXRF

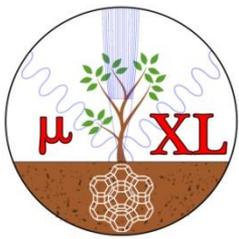

HR μCT

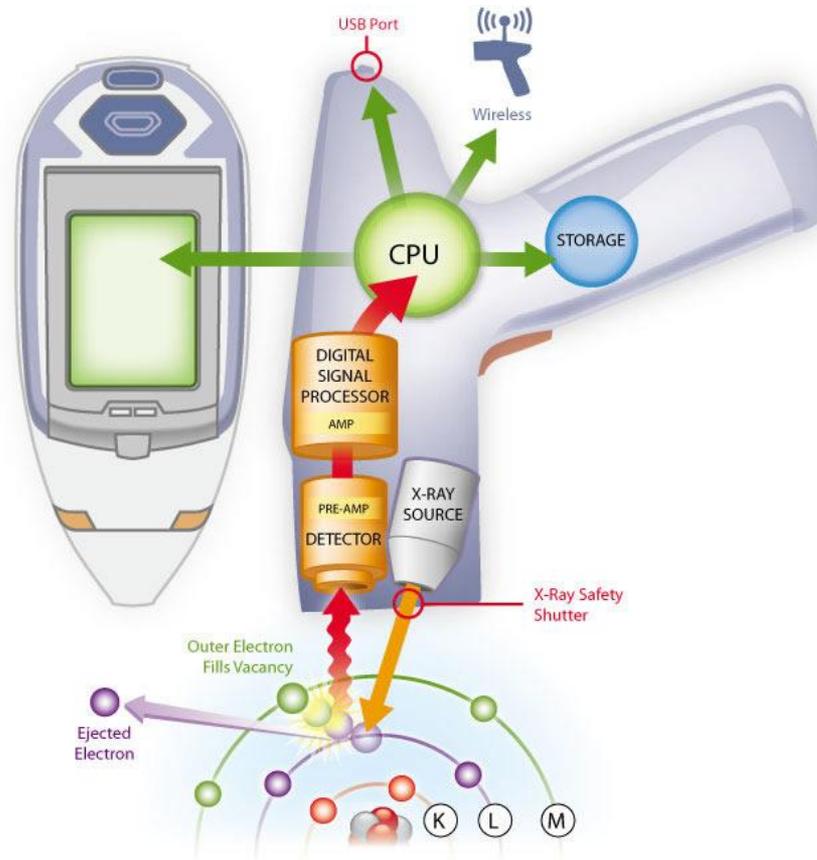

FESEM-EDX

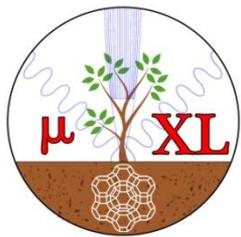

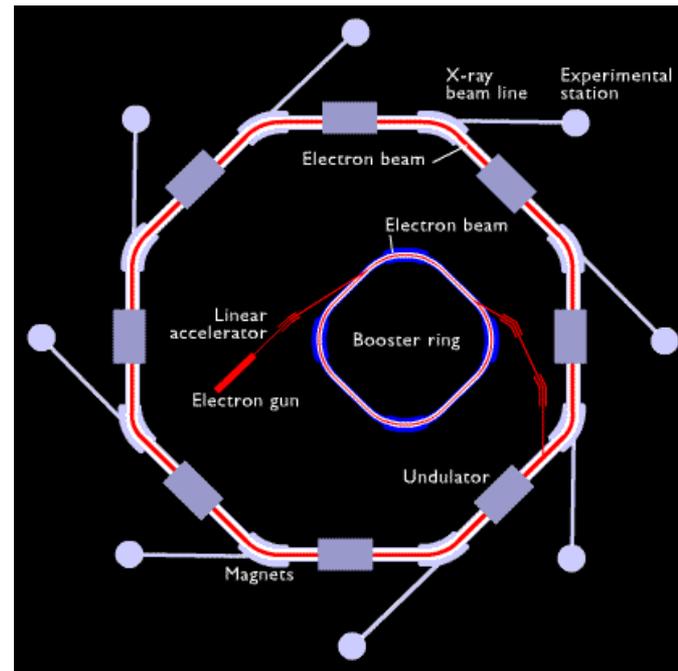

X-ray fluorescence spectroscopy: Portable Instrumentation

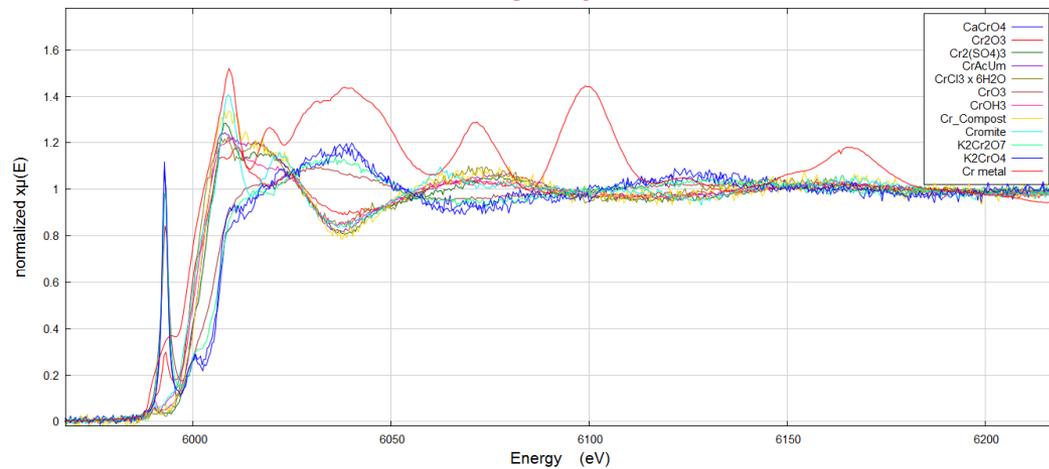

L.O.D.: 10-100 ppm → 100%
K → U

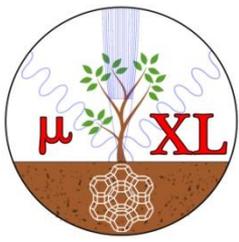

X-ray analyses @ synchrotron facilities

Cr XAS

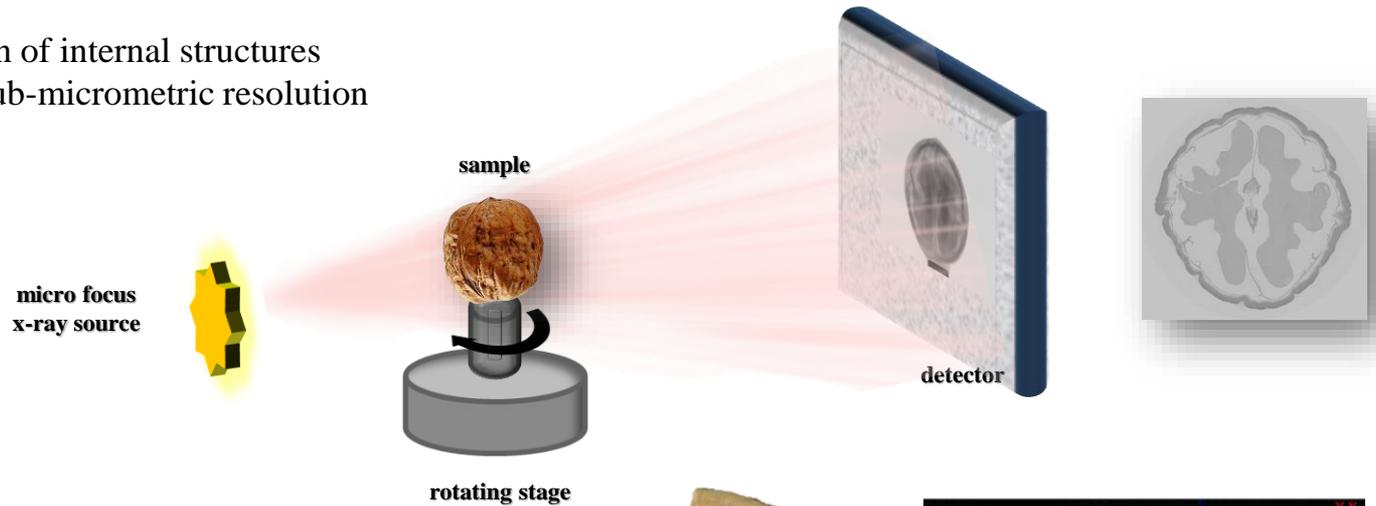

Computed X-ray microtomography

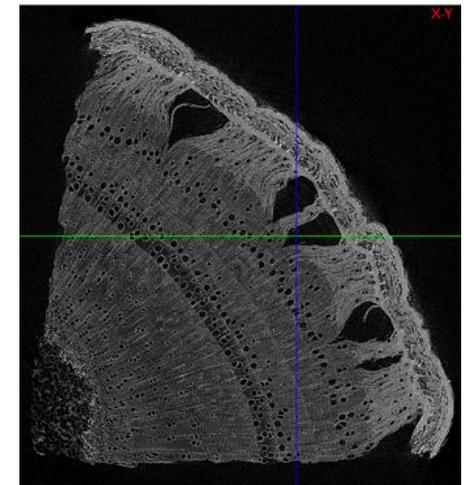

Basic principles of micro-CT

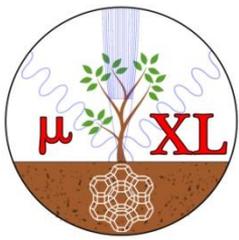

- ✓ non destructive
- ✓ detailed description of internal structures
- ✓ micrometric and sub-micrometric resolution

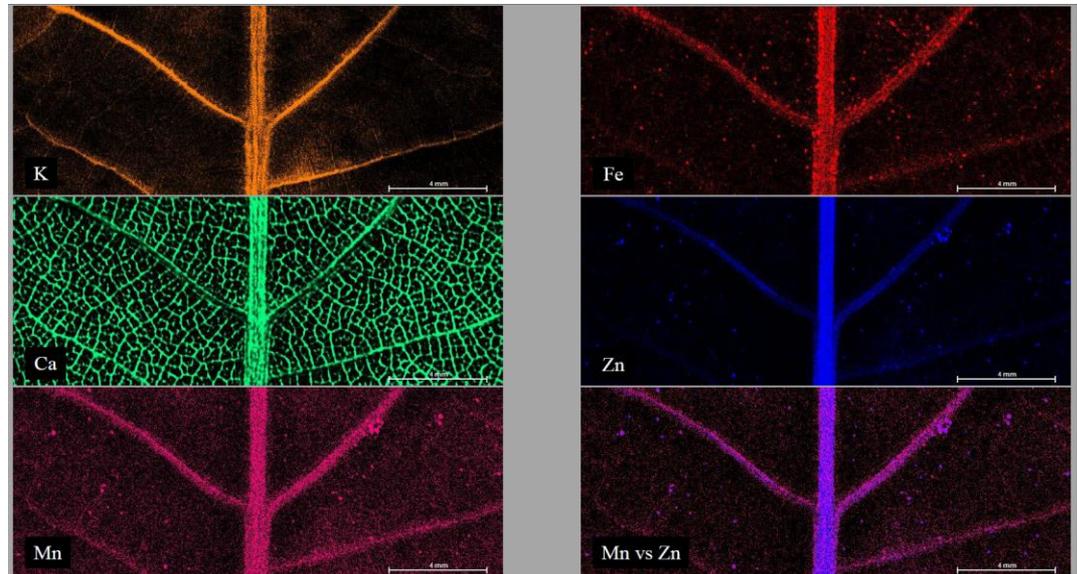

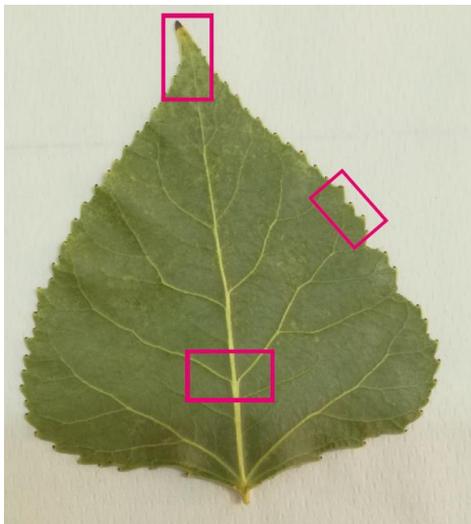

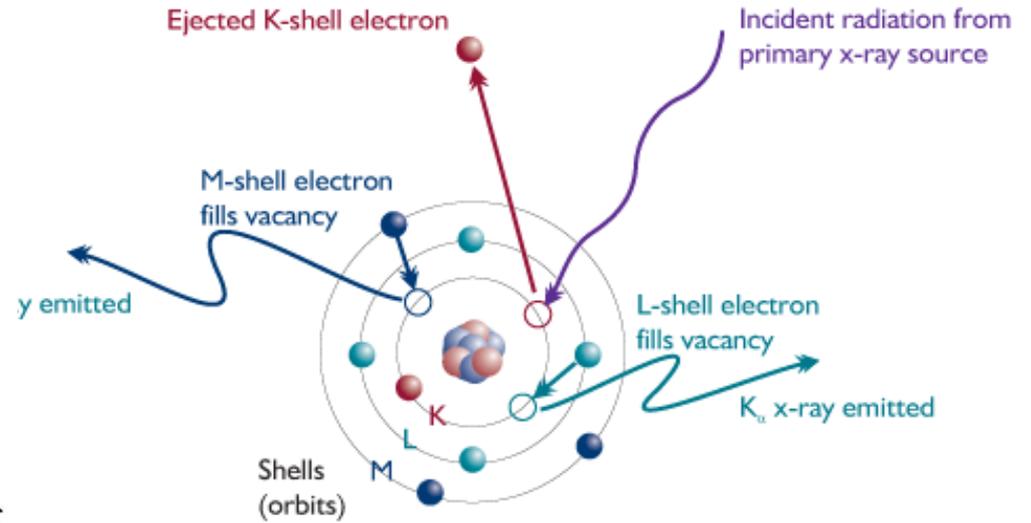

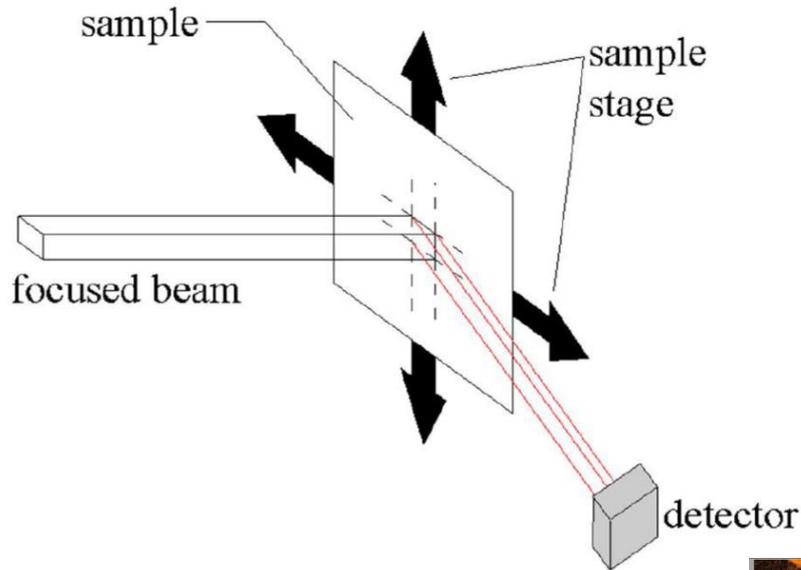

Photoelectric absorption of x-rays is very sensitively dependent on Z , the atomic number of the absorbing material

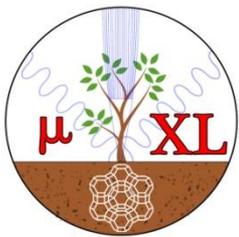

$$\tau \propto \frac{Z^4}{E^{3.5}}$$

Micro X-ray Fluorescence

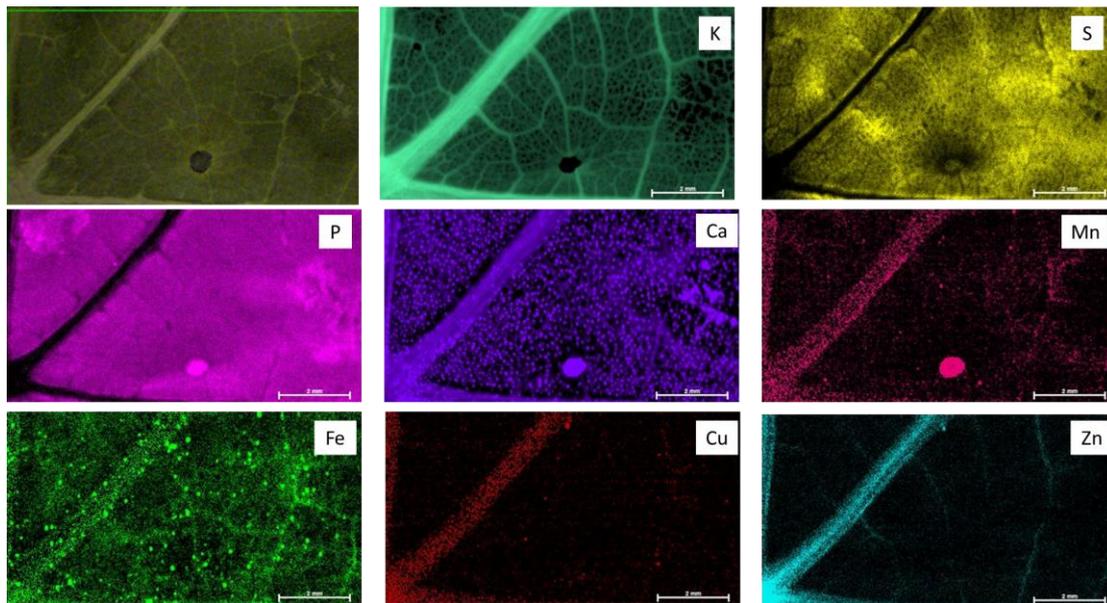

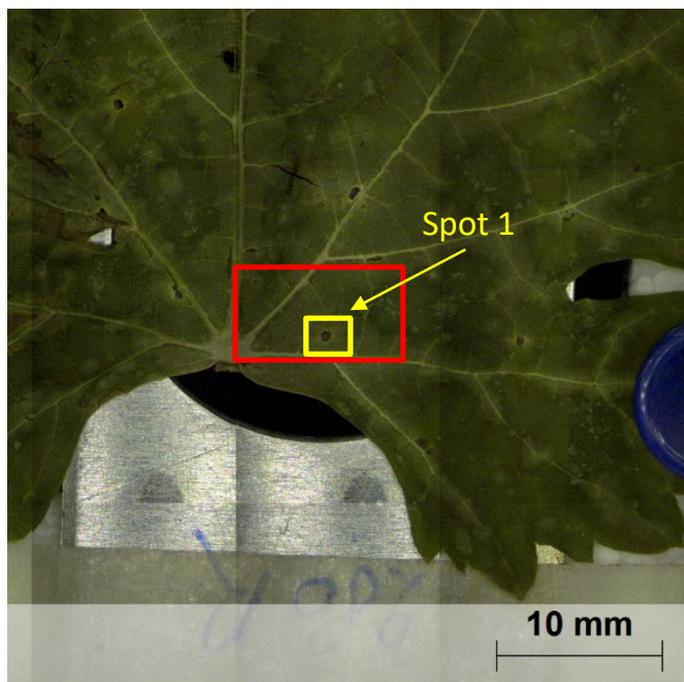

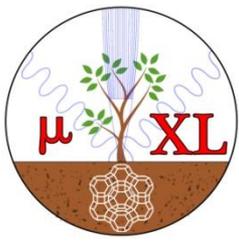

Micro X-ray fluorescence: Grapevine leaves

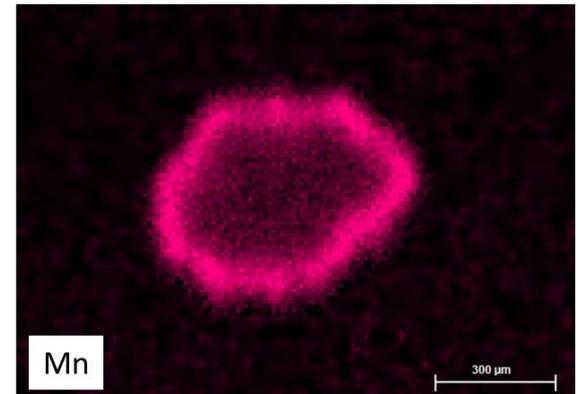

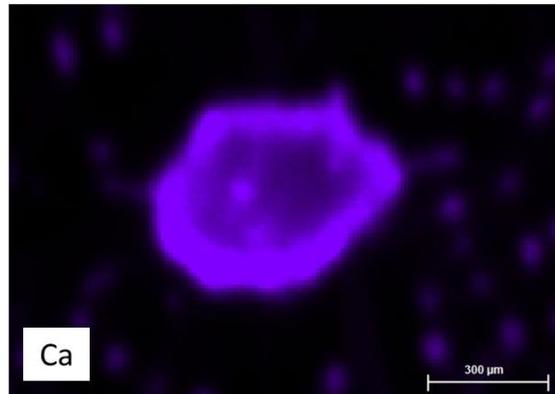

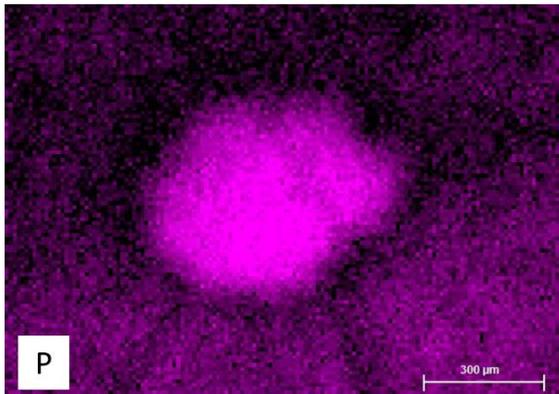

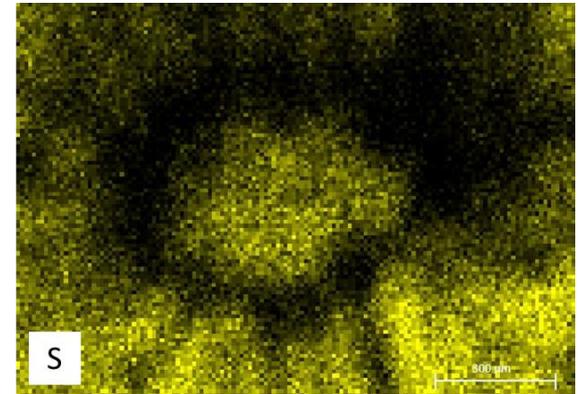

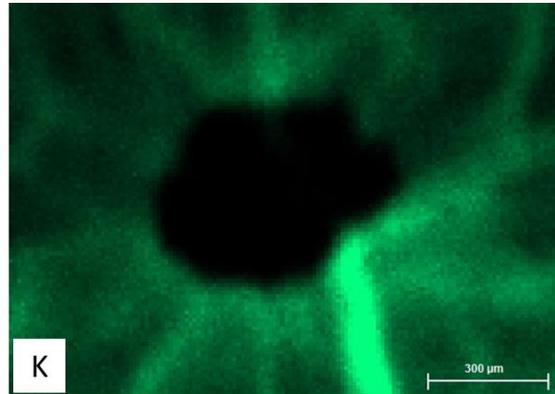

Plasmopara viticola infection affects mineral elements allocation and distribution in *Vitis vinifera* leaves

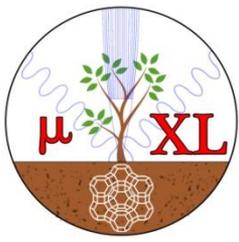

«Battle for nutrients» between plants and pathogens

(Naim et al., 2021, J. Exp. Bot.)

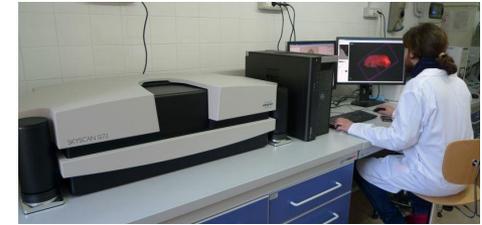

Applications to wood samples and results

Infected regions of the wood appear darker and crumbled

Healthy regions are lighter in colour and more compact

➤ HR μ CT

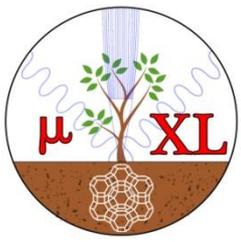

Evaluate structural differences between healthy and infected wood

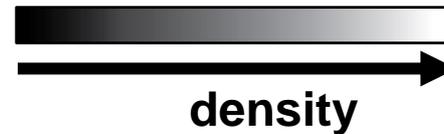

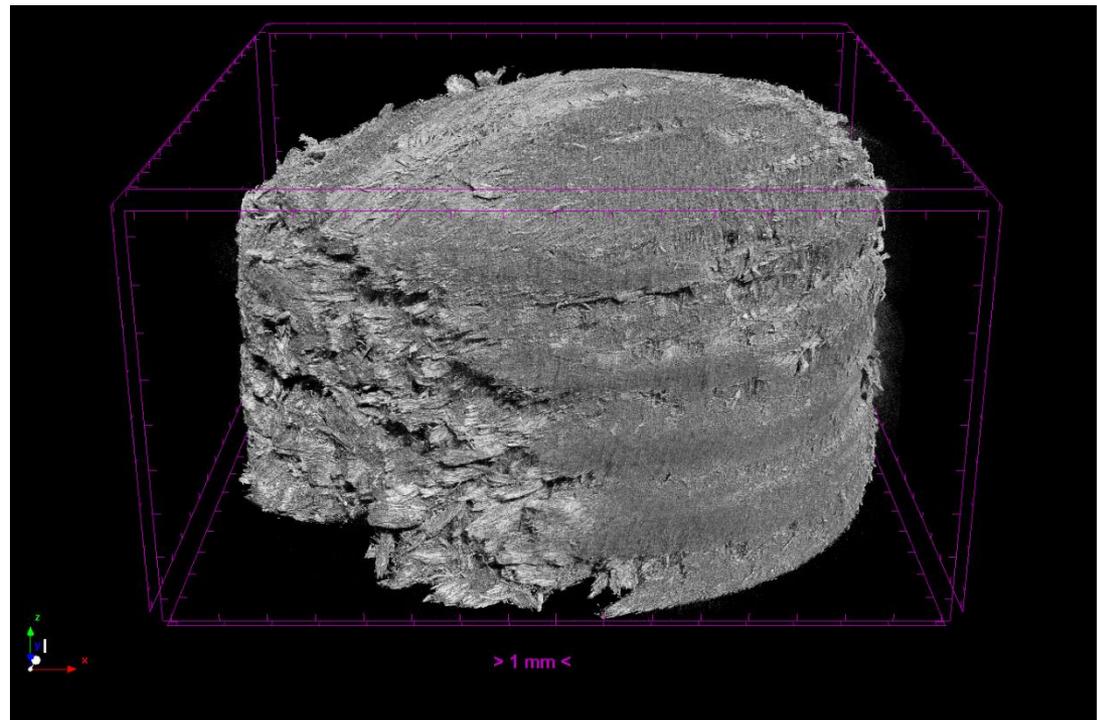

➤ μ XRF

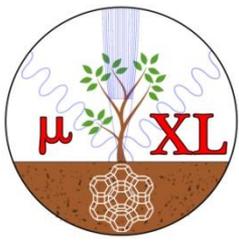

Investigate the distribution of elements within healthy and infected wood regions

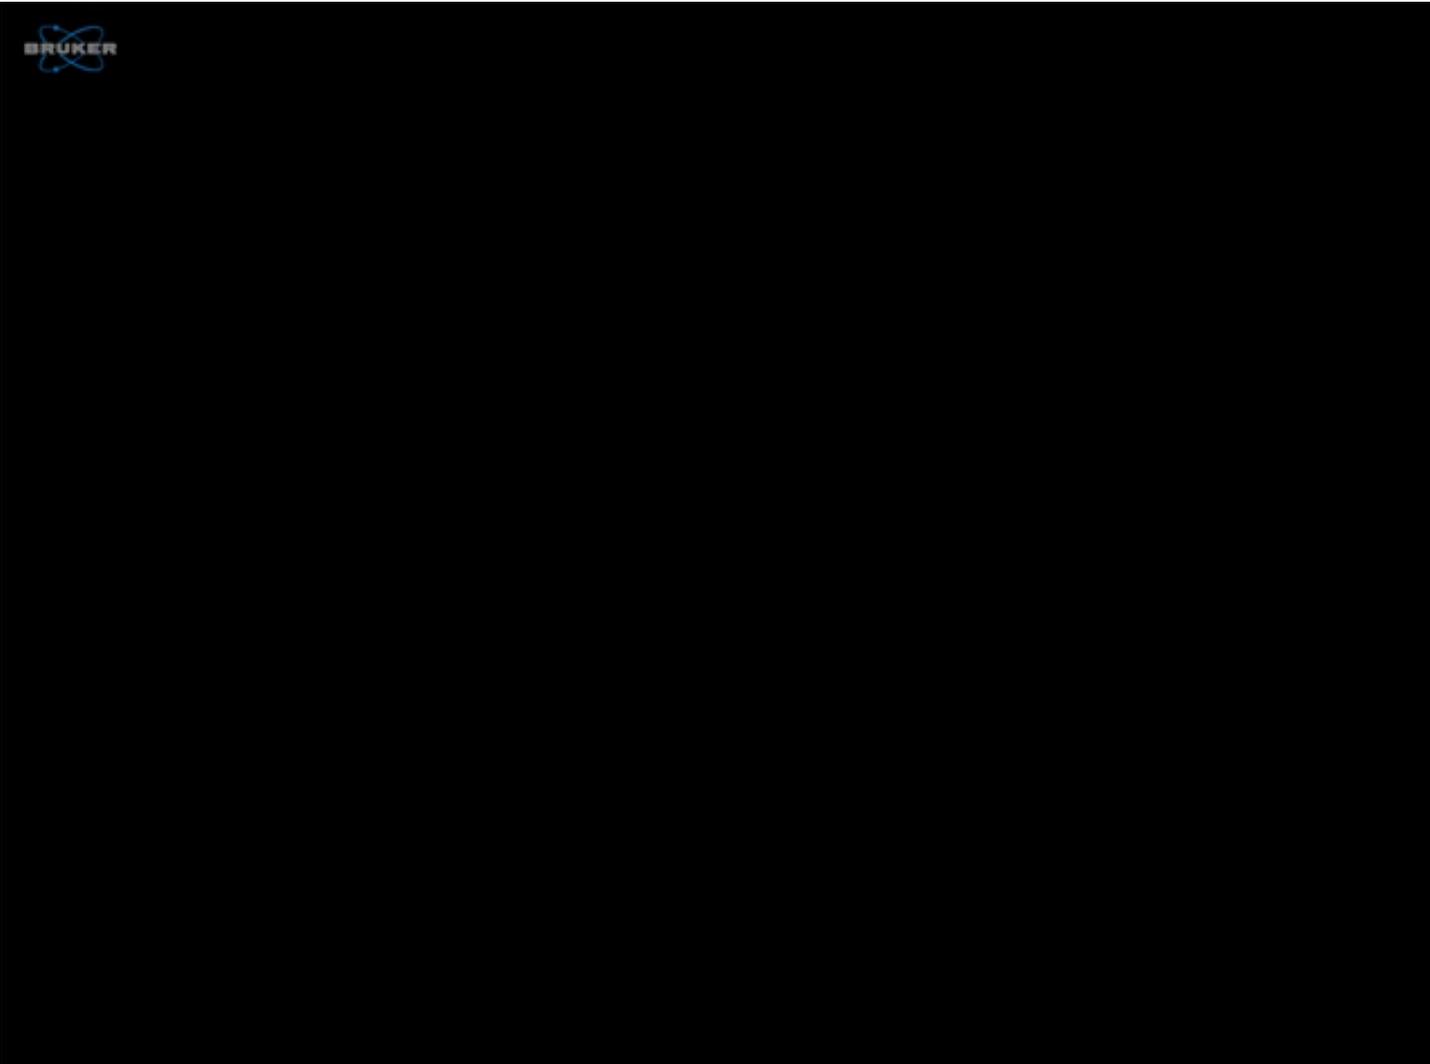

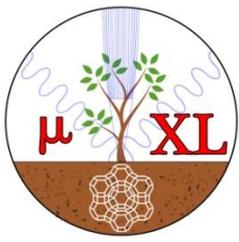

Investigating wood defects through X-rays: HR μ CT

Investigating wood defects through X-rays: HR μ CT

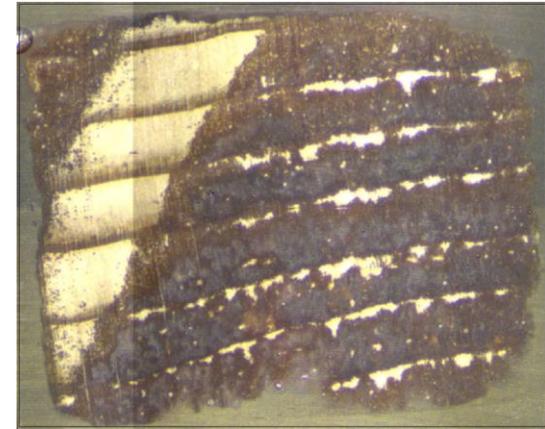

Investigating wood defects through X-rays: μ XRF

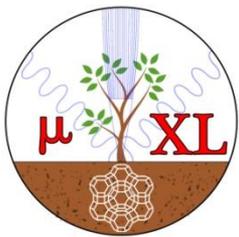

After μ CT analysis, the wood cylinder was embedded in epoxy resin, then cut to prepare a thin section of wood for μ XRF analysis (the red line in the upper figure indicates the cutting plane, passing through both infected and healthy wood tissues).

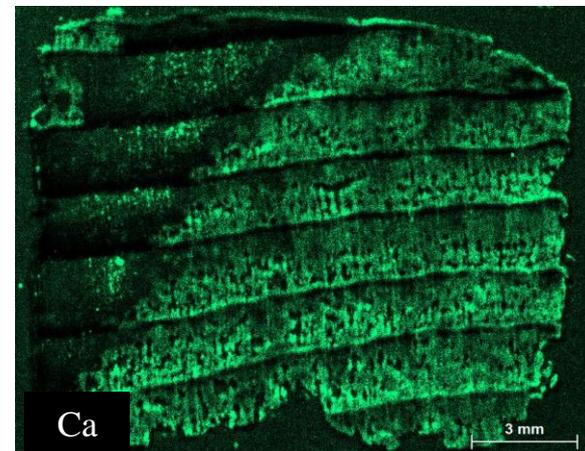

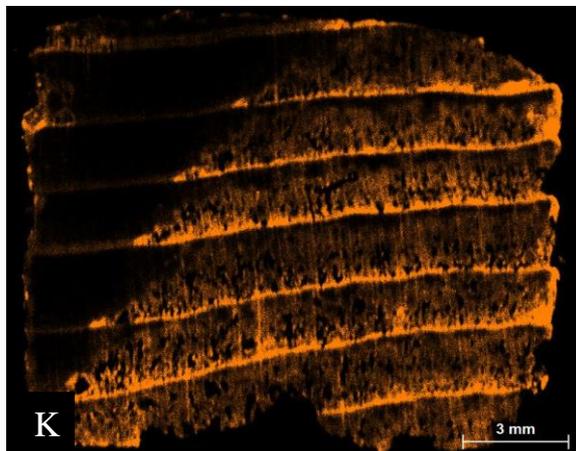

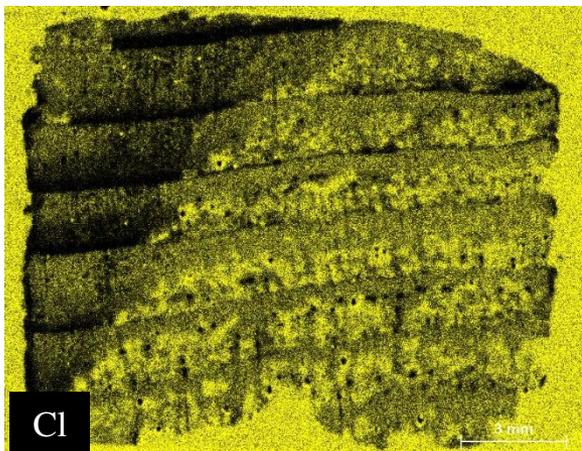

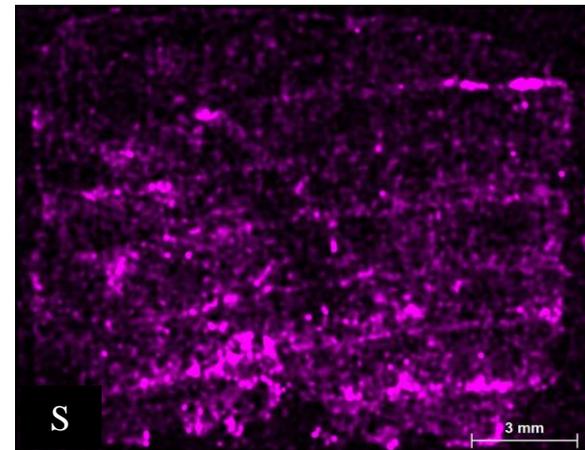

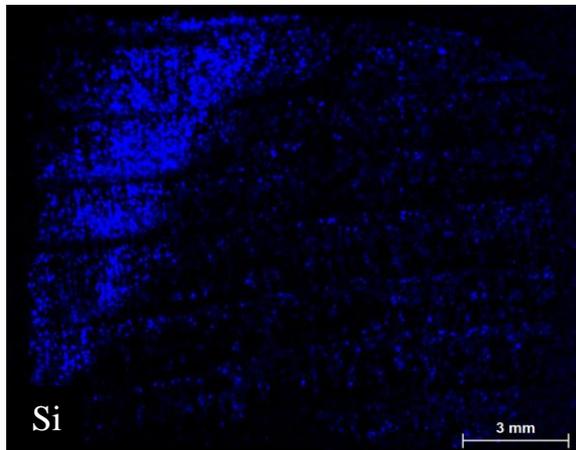

Embedded wood slice

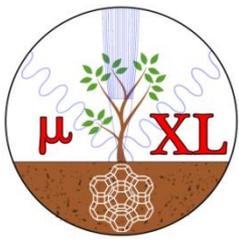

Embedded wood thin section ($\approx 200 \mu\text{m}$)

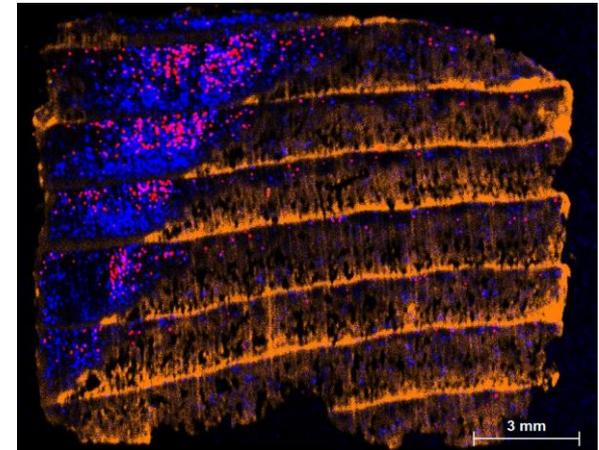

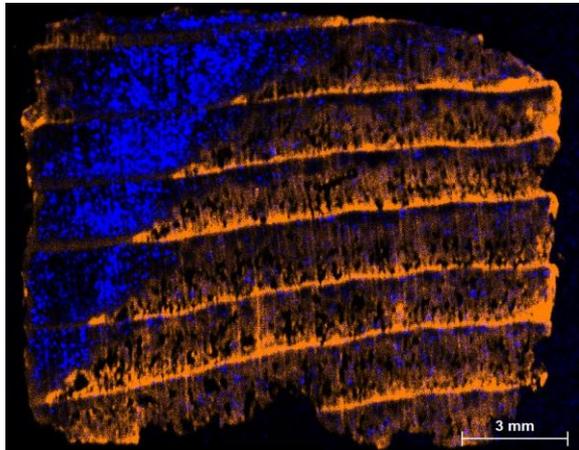

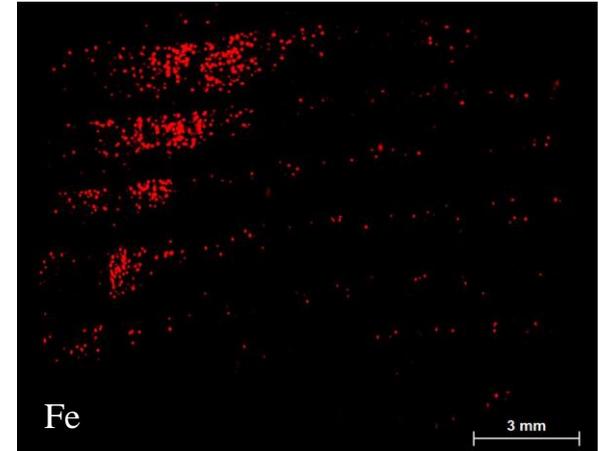

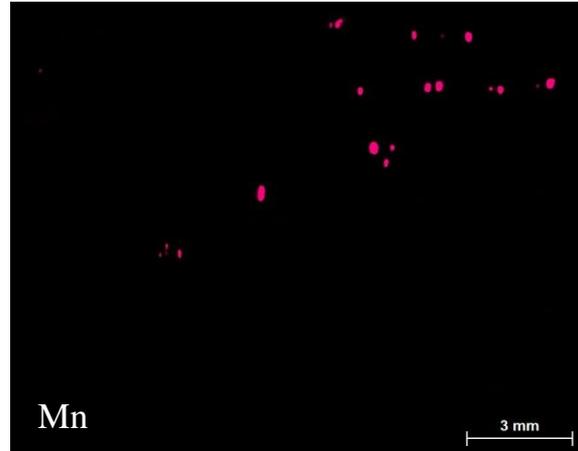

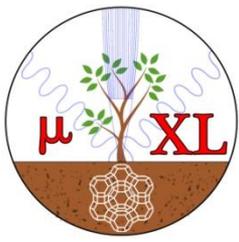

Investigating wood defects through X-rays: μ XRF

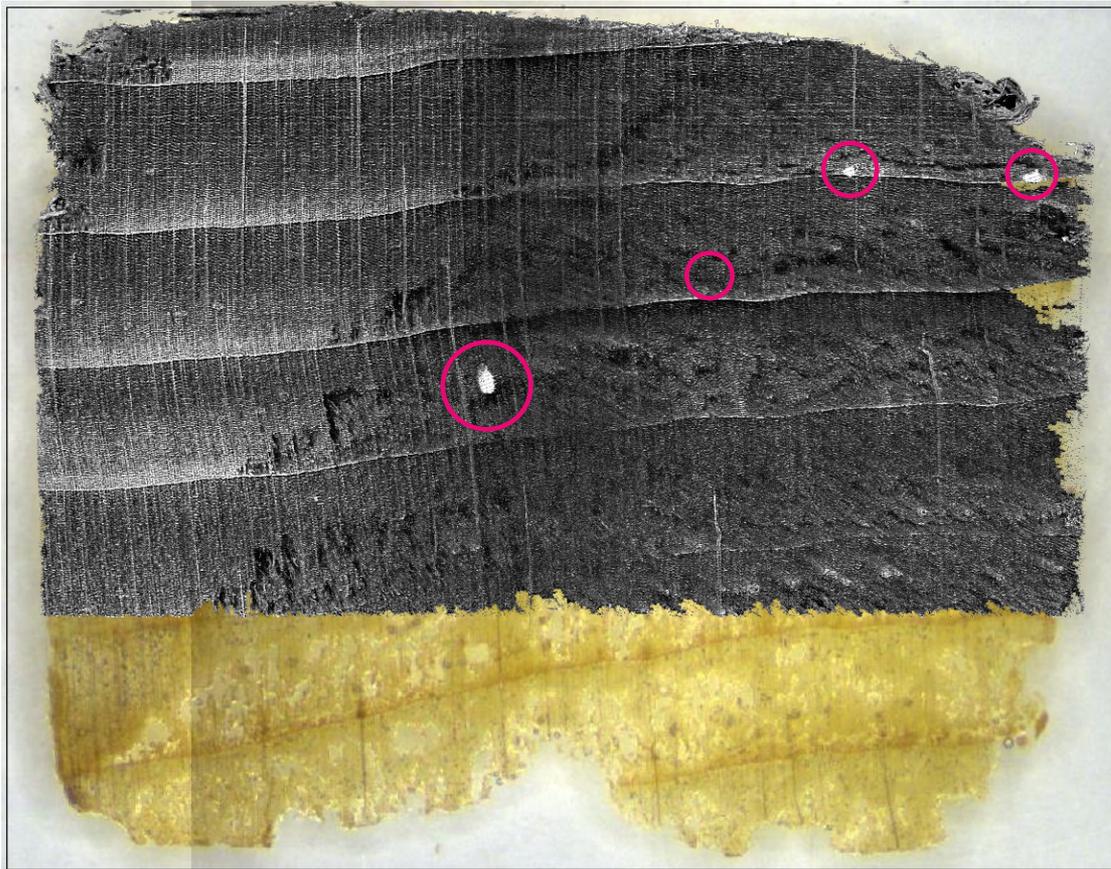

Investigating wood defects through X-rays: μ XRF

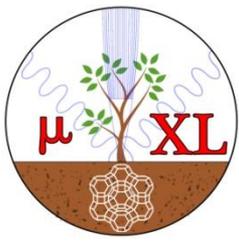

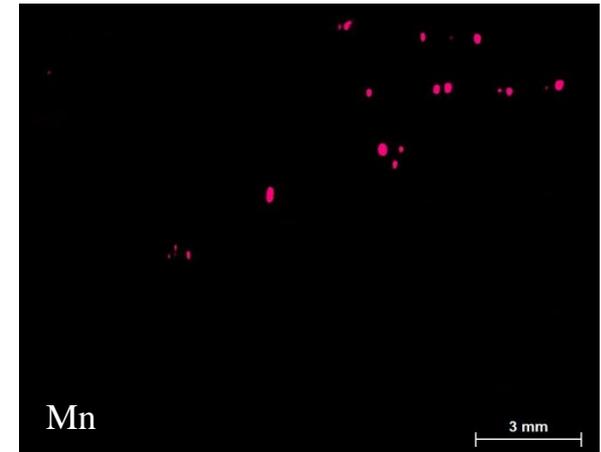

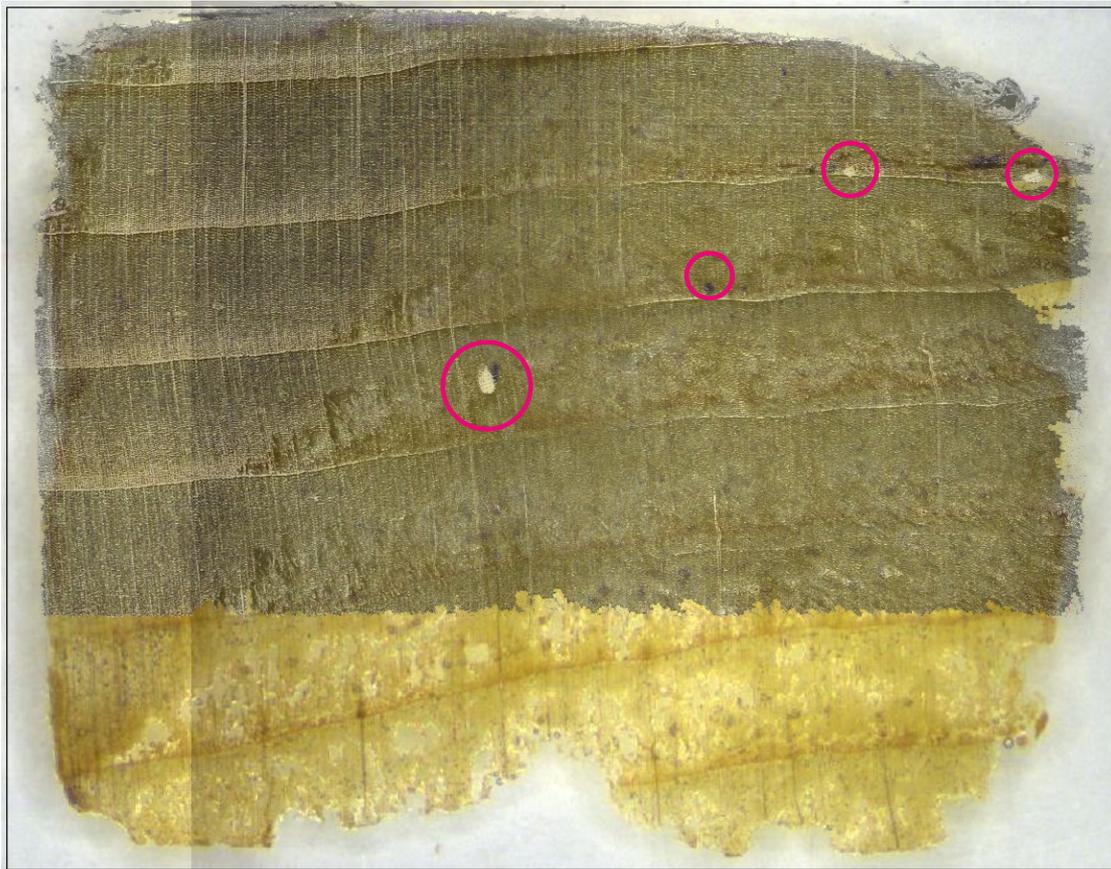

Investigating wood defects through X-rays: combined μ XRF and HR μ CT

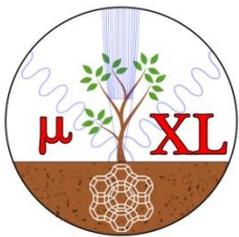

Comparison between the wood thin section used for μ XRF and the same section obtained through the HR μ CT rendering.

Investigating wood's defects through x-rays

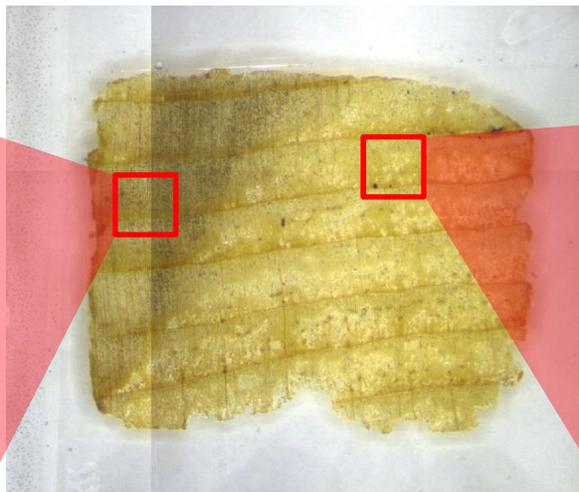

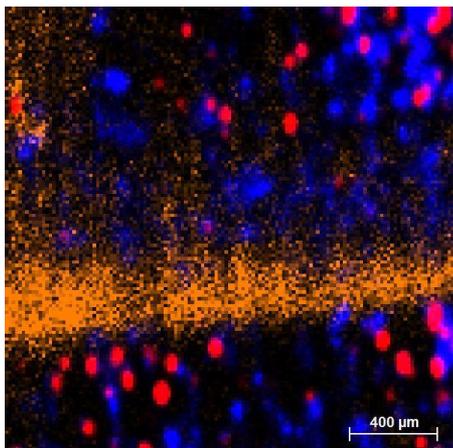

Denser inclusions, which appear as dark spots in the wood slice and as white spots in the μ CT rendering, correspond to localized Mn enrichment (μ XRF).

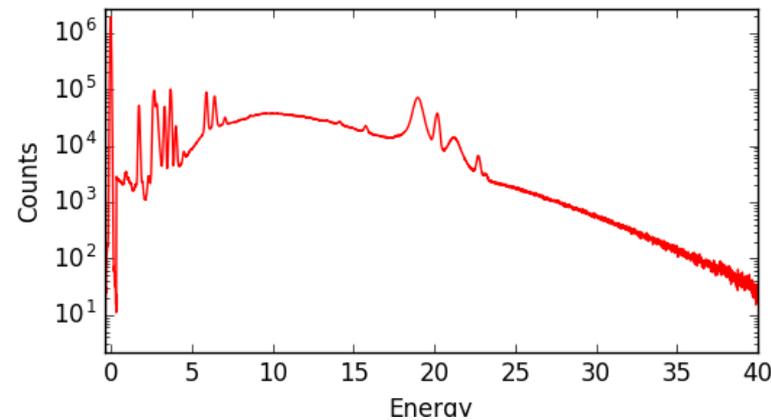

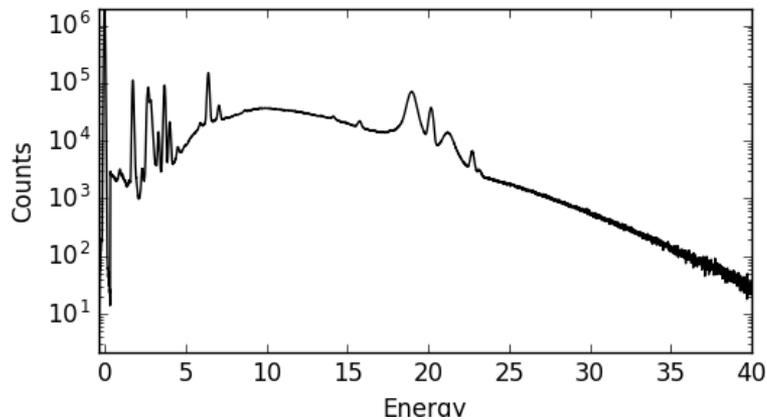

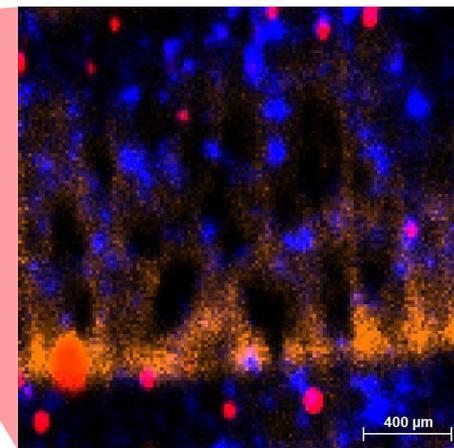

Investigating wood defects through X-rays: μ XRF

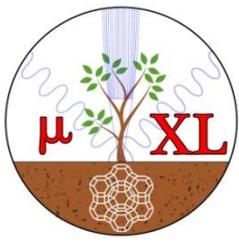

Part. 1

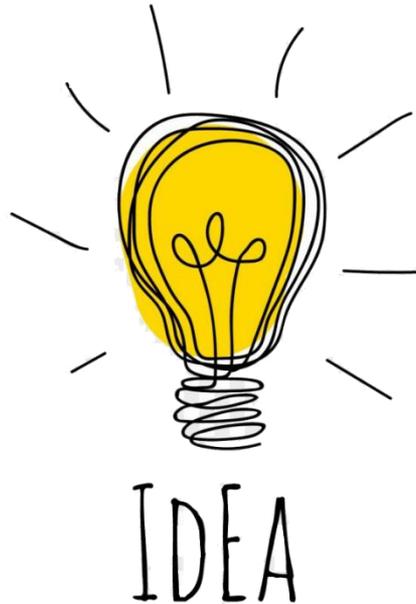

Part. 2

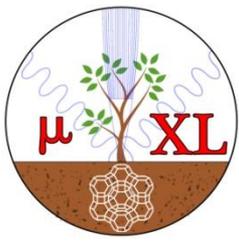

Investigating wood defects through X-rays: pXRF

**Could Mn be used as a marker to rapidly
diagnose (fungi) infected wood?**

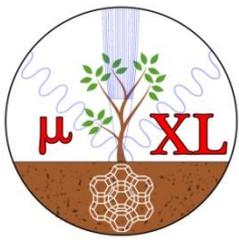

Conclusions

Manganese can be used as a «tracer» to early detect fungi infection, likely in combination with other hyperspectral information

X-ray fluorescence can be an effective, fast and non destructive technique to quantify Mn in wood samples

Wood analysis using tomographic and X-ray microfluorescence techniques

**Thank you for your
attention!**
